Christoffers.

Govt. night rate - collect.

Foodstuffs round the world--2.

Ecuador would foster fruit raising.

Realizing the possibilities of an export fruit industry, the Republic of Ecuador has just passed a law authorizing the president to grant special privileges and concessions to those who undertake the planting of fruit orchards in that country, according to a statement just received by the Department of Commerce from Consul General F. W. Goding, Guayaquil. These privileges are of a very broad character and the Ecuadorian government hopes to soon catch up with the progress already made by some of her South American neighbors.

Swedes perfect new refrigerating method.

So successful have been the recent achievements of the Ottosen refrigerating method that the sole plant in Sweden using this system has commenced negotiations for large shipments of fresh fish from Sweden to canning factories in the Balkan states. Trial shipments to Vienna and Barcelona have been made, says Consul Sholes, Goteborg, in a report to the Department of Commerce. On account of adverse circumstances the time of transportation was 15 days; the fish however arriving in perfect condition. This new system works 20 times faster than air-freezing, says the report, besides which the frozen foodstuff retains its structure and quality unchanged so as to be exactly like fresh when thawed, as the elements of taste as well as of nourishment are retained in the cells of fish or meat frozen by the wet method. The temperature can be brought down to 16 below zero, centigrade, and can be varied according to special requirements of the different kinds of foods, such as eggs, fresh fruits, etc. It is believed that this new method of sending fish must grow more and more popular, since shipping with broken ice always involves more or less risk and adds considerably to the freight. Many shipments of frozen foodstuffs have been made from this plant to the Swedish Army and Navy.

Alaska salmon canned in Canada.

A total of 1,290,326 cases of salmon were put up last year in British Columbia, according to a dispatch just received by the canned foods unit of the Department of Commerce from Consul E. A. Wakefield, Prince Rupert. A good proportion of this pack was made up of Alaskan salmon--1,349,439 pounds having been landed at Prince Rupert alone and possibly another 250,000 pounds at canneries on the Naas River or Queen Charlotte Islands.

French walnut crop increased; quality decreases.

While a tremendously increased yield of walnuts was gathered in France during the season just closed, early reports of the excellent quality of the yield have to a large extent proved erroneous. According to a report just received by the Department of Commerce from Consul Jaeckel, Bordeaux, nearly two-thirds of the crop, which was about three times as large as last year's, were more or less damaged from dry weather conditions prevailing during the middle of Autumn, and more especially by the excessive and persistent rains which fell in October.

New landlords for European sugar industries.

When war-born Poland began collecting herself together and took a stock of assets she found among other valuable inherited industries, three systems of sugar beet culture and sugar production--German, Russian, and Austrian. The pre-war production of beet sugar on these territories was about 600,000 metric tons, and during the last two seasons, Consul General Keena, Warsaw, informs the Department of Commerce that the annual output was about 150,000 tons. "The beet was cultivated most intensively and sugar produced most efficiently in the former German provinces of Posen (Posen) and Pomerania which gave an average yield per hectare of 30 tons
